00_MEMORY-CORE-tier1

TIER-1 DYNAMIC MEMORY CORE — v1.2

Issued: 3 Oct 2026 | *** THE BOARD NOW HAS FIVE SEATS ***

Paste at the start of any future chat in this project.

v1.2 changes: FIFTH SEAT ENACTED — the Income Origination Advisor is LIVE in the project constitution; all four blocks verified present (§1 persona, §3.5 Seat Boundaries, §3.6 Internal Angel Mechanism, §4 Income Concentration Dashboard). BOARD ASSEMBLE now outputs five personas. DO NOT ask him to enact it again. IOA FIRST MANDATE is now UNBLOCKED and sits at the top of the research queue. The −6% FTMO figure now carries its context in §2 — eleven months of learning to scalp, not a drawdown event (B6 applied to the board's own entry).

---

1. MACRO-WEALTH & RELOCATION STATE

SUBJECT: David Atanu, 30 (31 on 28 Nov 2026). Abuja, Nigeria. **PARTNER:** Sarah, 31, BA International Relations, pursuing USD copywriting clients. Not legally married; marriage planned pre-relocation. **FAMILY:** 4 siblings. Father d. Jan 2021 INTESTATE; circumstances under question and the family had reason to fear for their safety. Estate divided 2023 by written sibling agreement. Letters of Administration held by subject + 2 siblings + uncle as guardian.

NET WORTH: ~₦350,500,000 ≈ $262,700 (USD/NGN ₦1,334 official, Sep 2026)

Asset	₦	Note
Abuja apartment (1 of 4 units)	120,000,000	TITLE UNPERFECTED
Odion Cooperative	80,000,000	70.8% of financial assets
Lokoja apartment	47,500,000	TITLE UNPERFECTED. Yield 0.21%. SELL.
Apo land 578sqm	45,000,000	undeveloped, acquired Nov 2025
Mercedes C400 (2015)	25,000,000	₦47m sunk; estimate untested
USD $16,000	21,344,000	~$10,000 hard-committed to trading
Coronation Money Market Fund	5,000,000	EXECUTED 1 Oct 2026. 20.54%. 48-hr.
Piggyvest / receivable / Hisa	6,659,000	incl. ₦500,000 ring-fenced for IPO

LIABILITIES: ZERO DEBT.

INCOME: ₦2,100,000/mo Odion (3% × ₦70m; ₦10m of the ₦80m still ramping) + ₦91,666/mo rent. Principal reached ₦80m on 13 AUGUST 2026. **BURN:** ₦1,250,000/mo. **SURPLUS ~₦941,666/mo = ~₦11,300,000/yr.**

INCOME CONCENTRATION: Odion = 95.8% of monthly inflow (₦2,100,000 / ₦2,191,666). Track ALONGSIDE the 70.8% asset concentration. It is the more acute exposure, it is what the wedding gate is actually about, and the board failed to measure it until he corrected the framing on 3 Oct 2026. See §6 and B5.

LIQUIDITY: ₦8m within 48 hours (₦5m Coronation + ₦3m Piggyvest) = 6.4 months runway. UNCHANGED by the MMF transfer — roughly one business day separates the instruments. The transfer cost ZERO runway and gained ~₦527,000/yr. **CURRENCY:** ~94% Naira. Hard currency ~6%, mostly committed.

SUBJECT'S STATED ALLOCATION INTENT (recorded 1 Oct 2026)

The ₦5m MMF move was NOT a de-concentration action and was never presented as one. Subject: "*it was about making better financial decisions as the options open up to me.*" The board must hold TWO policies:

- **POLICY A — CAPITAL EFFICIENCY:** move idle capital to its best risk-adjusted use as options present themselves. Opportunistic, continuous, not tied to Odion.
- **POLICY B — DE-CONCENTRATION:** reduce Odion below 50% of financial assets.

Different objectives, different instruments. The MMF deposit served A and was neutral to B. Conflating them is a board error, not a subject error. See B2.

CONCENTRATION ARITHMETIC (reference only — do NOT re-explain to the subject)

Odion ₦80m / financial assets ₦113.0m = 70.8%. To reach 50%, financial assets must reach ₦160m — a gap of ₦47.0m. At ₦941,666/mo that is ~50 months. **CRITICAL PROPERTY, and the basis of Rule 1 v2:** the clock depends on surplus entering the NON-ODION FINANCIAL ASSET BASE, not the MMF specifically. Surplus routed to NGX equities, a second fund or hard currency advances the clock IDENTICALLY. Surplus routed to CONSUMPTION does not.

LIVE EQUITY ALLOCATION — DANGOTE REFINERY IPO

Offer 14 Sep – **13 OCT 2026**. Listing ~Dec 2026. Held via Hisa wallet. Tranche 1: ₦500,000 ALREADY ring-fenced. Tranche 2: ₦500,000, funded from monthly Odion returns. Approved as the FIRST CHANNEL A DRAW under Rule 1 v2 — 4.4% of the annual ceiling. Conditions documented by the subject in a "Dangote IPO research brief" on his own machine — **must be attached to a chat or landed as a project doc to be board-readable.**

FORWARD EVENTS

Period	Event
Nov–Dec 2026	Abuja tenant vacates; renovation window opens
Dec 26 – Mar 27	RENT GAP + capex. REVISED (1 Oct): ₦8m + 3 months surplus ₦2.82m − ₦500k IPO = ~₦10.32m at end December. Less ₦10m capex less ₦333k rent = **~₦0 AT END MARCH 2027.** HARDENS RULE 2.
Apr 2027	Re-let at ₦4.0–4.5m/yr OR short-let conversion

RELOCATION — DECIDED

PHASE A: Bangkok, Thailand DTV. 5yr, 180d/entry. All-in couple ~$27,656/yr. **PHASE B:** Dubai, UAE free zone + investor visa. TRIGGER: 150,000–200,000/*yrincome*.043,800/yr. **The trigger is a RISK LIMIT, not an aspiration** — above ~150*ktheThaiworldwide* − *taxexposure*(35–53k/yr) is 2–3x the Bangkok saving (16*k*/*yr*).* **CROSSOVER*：**87,000 remitted/yr. Move trigger set HIGHER so the move is not hand-to-mouth. **CLOSED PERMANENTLY:** CANADA — all routes, joint decision 18 Sep 2026. Thailand LTR (all 4 categories ineligible). **DEFERRED:** St Kitts CBI ~$268,822/couple. Singapore, Switzerland.

⚠ **DTV STATUS SUPERSEDED 4 OCT 2026 — see `visa-thailand-dtv-research.md`.** Thailand's 31 Aug 2026 rule change means he must apply at the mission covering his citizenship (Abuja only); third-country applications ended; a police clearance certificate is now mandatory on top of NDLEA; Thai language courses removed from soft power. **Whether Abuja processes DTV at all is UNVERIFIED and is a go/no-go.**

---

2. TRADING ARCHITECTURE STATE

STATUS: FIRST POSITIVE-EXPECTANCY SAMPLE ON RECORD (demo). No live capital at risk. **SAMPLE:** 105 closed trades, 9 Jun – 21 Sep 2026, XAUUSD, TradingView paper. Win rate 26.67% | Profit factor 1.450 | Expectancy +798.62/*trade*|*Net*+83,854.69 | Max drawdown −41,027(−3.81**PRIORLIVE**(*Dec*25–*May*26) : 190*trades*, 7.416,085.

CENTRAL FINDING: CONVICTION SIZING IS THE EDGE. Win rate rises monotonically with position size across quartiles: 19.2% → 23.1% → 30.8% → 33.3%. Flat-size counterfactual: −$14,155, PF 0.909. **Dynamic sizing added $98,010.** Q1+Q2 combined LOSE 36, 296*over*52*trades*; *Q*3/*Q*4*onlywouldhavemade*+120,151 on 53 trades.

RULE ADHERENCE: 8 of 29 days breached the self-imposed trade cap; 5 all-loss days exceeding stop-at-3 cost −$40,419. **Context required (B6): this sample was execution-focused, not rules-focused.**

TRADING WINDOW (captured 18 Sep 2026)

Full window 8AM–7PM New York | **PRIME window 10AM–1PM New York** Abuja UTC+1 prime 15:00–18:00 | Dubai UTC+4 prime 18:00–21:00 | Bangkok UTC+7 prime 21:00–24:00 **On the PRIME window only, Bangkok is 9pm–midnight and remains viable.** cBot automation removes the constraint entirely.

HRT ACCOUNT — AGREED STRUCTURE (23 Sep 2026)

Separate high-leverage account, isolated. Funded ONCE per year, $1,000, never refunded within the year. **Risk capped at 20% per trade, NOT 30%.** Max 3 HRT trades per month. 60–70% of profits withdrawn quarterly. Gated on RSFE validation + logged ranks + prop income. Target Q1 2027. Survival math at the corrected 9-loss streak: 10% risk = −61.3%, 20% = −86.6%, 30% = −96.0%. **SCALING CAP: 2–3% of liquid net worth**, NOT an absolute 100,000.*Atcurrentnetworth* 5,250. A $100k HRT account requires 3.3*m*–5m liquid.

PROP ACCOUNT INVENTORY AND DRAWDOWN LOG — OPENED 3 OCT 2026

ALL FOUR IN PROGRESS, ALL PHASE 1. NONE FAILED. NONE PASSED.

Account	Start	Current	Move	Status
FTMO #1	$100k	**$94k**	−6.0%	IMPAIRED
FTMO #2	$100k	$100k	flat	untouched
FundingPips #1	$50k	$49k	−2.0%	live
FundingPips #2	$50k	$50k	flat	untouched

CONTEXT FOR THE −6%, AND IT MUST TRAVEL WITH THE FIGURE (B6). He has traded that account since NOVEMBER 2025 — through the switch to scalping, while still discovering his edge. **−6% is not a drawdown event. It is the TOTAL COST OF AN ELEVEN-MONTH LEARNING PERIOD**, absorbed in one account. That is restrained. Any session quoting "−6%, impaired" without this sentence is repeating B6. **WHAT STILL STANDS:** the forward arithmetic. Target $110,000 from $94,000 = **+17.0% needed** against a $90,000 floor = **−4.3% available**. A fresh account is +10% against −10%. The remaining attempt is roughly **4× harder in risk-distance terms.** 60% of the loss budget is spent.

HIS SEQUENCING, endorsed: he bought the $50k accounts specifically to avoid failing the $94k FTMO account. Logged as E4.

THE OBSERVATION THAT MATTERS MOST: a POSITIVE-EXPECTANCY DEMO sits alongside FOUR UNPASSED CHALLENGES. The demo imposed no max drawdown, no daily loss limit, no consistency rule, no time limit. The challenges impose all four. **The gap is RULE SURVIVAL, not edge.**

BURN-COVERAGE TARGET — SETTLED AT 1.5%/MONTH

1.5% of $100,000 = $1,500 gross. On an 80% split: $1,200 net against $937 burn = **28% headroom.** The Naira would have to STRENGTHEN to ~₦1,042/USD before it stops covering — ~22% of buffer. **FX runs counterintuitively:** a STRONGER Naira RAISES the dollar target.

OPEN RED TEAM ITEM: the order-flow source changed (GC futures/Bookmap → TradingView spot footprint) and the A+ rank definition did not. Since conviction sizing is the edge and A+ rank drives conviction, a silent change to the rank input is a change to the thing generating returns. **Subject has confirmed the rank spec will be rewritten.** Resolve BEFORE HRT funding.

UNPROVEN: sample size (target 300+); ranks unlogged; demo conditions; realised-R vs planned-R gap; the stall-reduction behaviour.

---

3. COGNITIVE PROFILE

EDUCATION: BEng Mechanical Engineering (Control Systems), Upper Second Class Honours, Coventry University, July 2019. IELTS 7.5. MSc Mechatronics (Leeds, Jan 2021) aborted — sponsor/father died that month. **FORMAL WORK EXPERIENCE:** NONE DOCUMENTED.

RETRACTED FINDINGS — v0.1 ERRORS, CORRECTED ON EVIDENCE 18 SEP 2026

- **P1 "STATED-VS-REVEALED GAP" — WITHDRAWN.** The ₦15m was committed 13 AUGUST 2026; the affirmation was written 11 SEPTEMBER, AFTER reading the board's analysis. Evidence of updating, not of a gap.
- **P2 "NON-RECONCILIATION" — WITHDRAWN.** He had noticed the ramp both times and simply had not reported it. Reporting gap, not a reconciliation gap.

STANDING OBSERVATIONS (Phase 2 agenda, unvalidated)

- **P3 ANCHORING ON PURCHASE PRICE.** C400 valued at exactly what was paid, untested. TEST: 3 dealer offers. Pending.
- **P4 MISDIAGNOSIS-THEN-RESPEND.** ₦22m on repeat symptoms of one undiagnosed fault. Self-identified. NOT averaging down — see P6.
- **P5 RELATIONSHIP-AS-COLLATERAL.** Odion risk accepted on a 15-year relationship. He acknowledges it does not justify the sizing.
- **P6 SCALING-INTO-WINNERS FRAME (his own, ACCEPTED).** Odion has paid on time for 3 years; adding to winners is legitimate. **The residual issue is the absence of a MAXIMUM TOTAL POSITION SIZE**, not the scaling logic. Still unset.

EMPOWERING (strongly evidenced): revises position on evidence without defensiveness; SUPPLIES EVIDENCE THAT FALSIFIES THE BOARD'S OWN FINDINGS rather than accepting flattering errors; discloses unfavourable facts unprompted; distinguishes "I don't know" from guessing; restraint on tools and prop fees; zero debt at 30; explicitly requests harder scrutiny.

E1 — closes a flagged risk without being told how (1 Oct). **E2** — corrects the board's model of his own reasoning (1 Oct). **E3** — chooses the harder governance option (1 Oct): offered Channel B capped or uncapped-with-soft-trigger, he chose the design that constrains him more. **E4** — protects the expensive attempt with a cheaper one (3 Oct), and caught a design flaw in the board's own angel mechanism.

3b. BOARD ERROR LOG AND PRINCIPLES

AI drift over a 30-year engagement is not prevented by good intentions. It is prevented by the board keeping a ledger of its OWN errors and reading it.

- **B1 CHRONOLOGY BEFORE PATTERN** (18 Sep). Named a behavioural pattern from an assumed sequence it had not verified. **RULE: establish the timeline before naming the pattern.**
- **B2 ATTRIBUTING A MENTAL STATE, AND EXPLAINING THE KNOWN** (1 Oct). Graded a decision against an objective he had not invoked. **RULE: grade a decision against the objective HE stated for it.**
- **B3 INFERRING FROM A SECONDARY SOURCE'S SILENCE** (1 Oct). **RULE: for "does authority X offer Y," query X's own system or ask X directly. Absence of publication is near-zero evidence.**
- **B4 OFFERING AN OPTION THAT DOES NOT FIT THE CASE IT WAS DESIGNED FOR** (1 Oct). **RULE: test a proposed rule against the specific live case before offering it.**
- **B5 READING THE BOARD'S OWN METRIC INTO HIS WORDS** (3 Oct). He meant INCOME dependency; the board computed ASSET ratio. **RULE: a shared word is not a shared definition.** It also concealed the real number — income concentration 95.8%.
- **B6 USING A FIGURE STRIPPED OF THE BOARD'S OWN CAVEAT** (3 Oct). **RULE: a figure travels with its caveat or it does not travel.**
- **B7 REPORTING A CAPABILITY AS ABSENT WITHOUT TESTING IT** (4 Oct 2026). §4b of this core stated that a cloud session "CANNOT read or write" the local folder. **False.** Cloud sessions have written to it repeatedly via the remote-devices bridge. The claim would have caused future sessions not to try. **RULE: test the capability before documenting its absence — this is B3's failure mode applied to the board's own tooling.**
- **BP1 DESIGN RULES TO BE KEEPABLE, NOT ASPIRATIONAL.** Logged at his instruction, 1 Oct. Before issuing any rule, ask what real circumstance would force a breach and build that channel in.

BIANNUAL BELIEF ASSESSMENT: due MARCH 2027 and SEPTEMBER 2027, then 6-monthly. Re-score P3–P6 and E1–E4 against actual equity curve, capital allocation decisions and Life KPI data — BUT verify chronology (B1) and benchmark against HIS stated objective (B2) first.

---

4. ACTIVE DECISIONS & STANDING RULES

RULE 1 v2 — RATIFIED 1 OCTOBER 2026. ACTIVE.

Clause	
1 — ODION FLOOR	₦0 of monthly surplus to Odion until Odion < 50% of financial assets. **ABSOLUTE.** No channels, no carve-outs. v1's force was never "100% to the MMF" — it was "0% to Odion."
2 — DEFAULT	Absent an invoked channel, 100% of surplus to the Coronation MMF.
3 — CHANNEL A (capped, clock-NEUTRAL)	Up to **20% of ANNUAL surplus (~₦2,260,000/yr)** to other non-Odion FINANCIAL assets. ANNUAL not monthly — 20% of a month is ₦188,333 and the Dangote tranche alone is ₦500,000. See B4. Cost: liquidity and price risk only.
4 — CHANNEL B1 (unforeseen)	Uncapped **suspension**. **Soft trigger:** any draw above one month's full surplus (₦941,666) is written up BEFORE the money moves. Clock-stretching: ~50 months becomes ~62 at a sustained 20% diversion.
4 — CHANNEL B2 (planned life expenditure)	Must BOTH distort a month AND be a one-off milestone. **Funded by SINKING FUND, not withdrawal** — amount ÷ months remaining, taken from surplus before the sweep. If the date and amount cannot be named, IT IS NOT B2.
5 — REVIEW	Anything over ₦250,000 in the ledger; Channel A reconciled against the ceiling each December.

THE CHANNEL B TEST — three questions, all must agree: (1) Did it choose you, or did you choose it? (2) Does delay make it worse? (3) Would you have called it a life event before you wanted the money?

WHAT THE CRO WOULD REJECT: opportunities in an emergency costume ("limited-time investment", "a plot of land came up"); **"Odion is offering a better rate" — REFUSED BY CLAUSE 1 regardless of label**; prop fees, data feeds, VPS (these are burn — if tooling exceeds burn, the BURN NUMBER IS WRONG); short-let capex (Rule 2 assigns it); the DTV seasoning deposit (Channel A — it is a financial asset); lifestyle upgrades

framed as needs. **THE GENUINE EDGE CASE:** routine C400 maintenance is burn; a sudden ₦3m engine event is real Channel B — but if it is the fifth instance of the same undiagnosed fault, P4 applies.

SETTLED: birthday gifts are **BURN**, not B2. A single large milestone gift (ring, significant anniversary) is B2.

RULE 2

Short-let capex is funded from a **partial Odion redemption**, NOT from the emergency reserve. HARDENED 1 Oct — end-March 2027 working capital projects to ~₦0 if capex comes from the reserve.

RULE 3

No sibling capital is spent on the short-let before a **written, signed sibling agreement** exists.

THE WEDDING

Target year 2027. Confirmed B2. No date, no sinking fund running. ONE GATE: a reliable non-Odion income stream, passive or active, covering monthly burn (₦1,250,000) without drawing principal, that can also fund the wedding. **CONDITION C** is a sequencing rule, not a prohibition: no principal draw until the new income proves burn coverage, then a **REIMBURSABLE** draw. CRO condition accepted — amount, monthly repayment and completion date go in the ledger **at the point of withdrawal**, or it is a drawdown with good intentions. **MMF yield is RULED OUT of burn coverage** by him — designated to compound and for Channel A. So the Lokoja sale improves income concentration (95.8% → ~70.1%) **without moving the gate. REVIEW MECHANIC:** Mar 2027, Sep 2027, then 6-monthly. One test — **six consecutive months of non-Odion income ≥ burn.** When it trips: set a date, start the sinking fund from that stream. **SARAH** has agreed the gate. Her income is excluded until she is earning AND a joint account exists. **Her income path is DEFERRED, not open** — no future session raises it before then. **2027 RESTS ENTIRELY ON A NEW INCOME STREAM.** The asset route cannot complete that year.

MMF

Coronation Money Market Fund, 20.54% YTD at decision, ₦10,000 min, 1.50% fee, 24–48hr redemption. **₦5,000,000 EXECUTED 1 OCT 2026. MODEL INCOME AT 17–20%, NOT 20.54%.** The CBN is easing (MPR 26.50 → **23.00%, 22 Sep 2026**). Reinvestment-rate risk is the MMF's real risk. **RECONCILIATION METHOD:** a constant-price fund has no purchase NAV. Reconcile opening balance + date against income credited per period. Do NOT record the client ID in project docs. **OPEN ASKS TO CORONATION:** audited TER in writing; explanation of the 1.0% → 1.5% fee increase; open a **Coronation Fixed Income Dollar Portfolio** ($1,000 min, 5.39%) before Q1 2027 so the rails exist before the Lokoja sale. **LOKOJA PROCEEDS (2027):** split ~50/50 Naira MMF to USD Dollar Portfolio — revised from 60/40 after the 350bp cut. The dollar fund wins whenever the Naira depreciates more than ~11.0%/yr; over 2021–2026 it averaged ~−21%/yr.

SHORT-LET PARAMETERS

All 4 units convert; each sibling funds their own flat ~₦10m. If a sibling cannot fund, the split does NOT change. Paid manager at 10–15% of revenue. Informal to start. **Apo Resettlement is AEDC BAND A (₦209.50/kWh)** — solar is load-bearing, not optional. **₦100,000–150,000/night is PER FLAT and is an ESTIMATE, not a comparable.** Board research says realistic Apo Resettlement ADR is ₦45,000–70,000; verified Abuja transaction data is ADR ₦81,374 at 26.2% occupancy, revenue −22% YoY.

SCHEDULED TASKS — LIVE

Dangote IPO decision check (one-off, 10 Oct 2026) · Rule 1 monthly sweep (5th of each month) · Thailand worldwide-tax check (quarterly) · Dubai income-threshold review (semi-annual). **All cloud-only. They can ask and record; they cannot verify.**

4b. RECORD-KEEPING ARCHITECTURE

THREE STORES:

1. **PROJECT DOCS** (`claude/*.md`) — the authoritative board record, visible in claude.ai across every chat in this project.
2. **HIS LOCAL FOLDER** — `C:\Users\The Griffin\Claude\Projects\TGW-Board of Directors` . **CORRECTED 4 OCT 2026 (B7): a cloud session CAN write here, via the remote-devices bridge.** The earlier claim that it could not was false and untested. It does not *auto-sync* — a `project_write` does not update it — but a session can and should push files directly.
3. **THE GIT REPO** — `docs/` in his repository.

A stale local copy is not a failed write.

---

5. RESEARCH MANDATE — OPEN ITEMS

IMMEDIATE

- [ ] **ENGAGE THE LAWYER ON THE TITLE CHAIN.** KR2.1, open since 18 Sep 2026. Gates the Lokoja sale, asset de-concentration and immigration proof-of-funds. NOT the wedding (B5 retracted). Brief written at `capital-title-sprint.md` §E2. **Waiting on an appointment, not on analysis.**
- [ ] **IOA FIRST MANDATE — TOP OF THE QUEUE.** Rank income streams to ₦1,250,000/mo, passive-first, portable through relocation, weighted to Tier 1 testability (≤₦500,000) since Tier 2 capital is nil until ~Aug 2027. Size the single-source risk: what happens to the 2027 gate if trading does not reach burn coverage during 2027. Ranked table, shortlist ≤3, stating what was excluded on capital grounds and what it would take.
- [ ] **EMAIL consular.abj@mfa.go.th** — does Abuja issue DTV at all? Which police clearance? Fee? Interview? **Go/no-go; nothing else in Phase A matters until this returns.**
- [ ] **RED TEAM THE $94k FTMO ACCOUNT** before any capital or attention returns. Verify exact FTMO parameters, price a reset, decide live vs impaired.
- [ ] CONFIRM THE PROFIT SPLIT per firm. 80% is the working assumption and drives the whole burn-coverage table.
- [ ] POPULATE THE DRAWDOWN LOG: where the −6% and −2% came from, daily-limit proximity, minimum trading days, time limits per product.
- [ ] Make the **Dangote IPO research brief** board-readable. Offer closes 13 Oct 2026.
- [ ] First Coronation statement, for realised-yield reconciliation.

- [--] **SARAH'S INCOME PATH: DEFERRED** at his explicit instruction. Do not raise or score until she is earning AND a joint account exists.

PROPERTY & TITLE

- [ ] Deed of Family Partition/Assignment, Abuja + Lokoja. Stamping 1.5% → Minister's/Governor's Consent → registration. 3–12 months.
- [ ] Retrieve original C of O (father's name, held by the Odion founder; recoverable on request).
- [ ] Formal valuation, Lokoja flat — registered estate surveyor.
- [ ] FCT short-let licensing — FCTA Social Development Secretariat, Dept of Tourism.
- [ ] Does the 5% FCT consumption tax apply to short-lets? Verify with FCT-IRS.
- [ ] Change-of-use consent, and FCTA's land-title-revocation power. Written legal opinion.
- [ ] Small-company CIT threshold: ₦50m vs ₦100m statutory conflict.

CAPITAL & RISK

- [ ] Odion succession: any officer besides the founder? Key-man insurance? Documented recovery process?
- [ ] C400: 3 written dealer offers to test the ₦25m estimate.
- [ ] **MAXIMUM TOTAL POSITION CAP for Odion** — the residual P6 issue. Still unset.

RELOCATION

- [ ] UAE free zone TOTAL cost of ownership, year 1 and renewal.
- [ ] **UAE broker + prop-firm access and corporate account opening, Nigerian passport. PRIORITY — Phase B gating item.**
- [ ] Bangkok international school fees, verified range.
- [ ] Nigerian tax residency exit rules on departure.
- [ ] PCC + NDLEA runway — two non-family guarantors are the binding constraint.

TRADING (Phase 3)

- [ ] Rewrite the A+ rank spec for the TradingView spot footprint. BEFORE HRT funding.
- [ ] Log rank at entry from the next sample onward.
- [ ] Test the stall-reduction behaviour against data (`STALL-CUT: Y/N` + reason).
- [ ] Capture **MFE** (maximum favourable excursion) in the cBot journal — it is the correct test of selection vs management.
- [ ] Grow the sample to 300+ trades.

---

6. STANDING BOARD FINDINGS (do not re-litigate)

- **Odion is NOT a Ponzi.** Verdict on 9 evidentiary tests. The risk is key-man and absence of a position cap, not fraud.
- **Portfolio income CANNOT fund relocation.** Active income is the load-bearing pillar.
- **PASSIVE DE-CONCENTRATION ALONE TAKES ~50 MONTHS.** Necessary but not sufficient. The Lokoja sale does it in one transaction.
- **DE-CONCENTRATION DEPENDS ON THE BASE, NOT THE INSTRUMENT.** A reallocation between two non-Odion assets moves concentration by 0.00pp.
- **THE BOARD HOLDS TWO POLICIES:** capital efficiency and de-concentration. Grade each decision against the policy HE invoked.
- **CONVICTION SIZING IS THE TRADING EDGE**, not an artefact. Verified by quartile analysis; the earlier Pearson-correlation finding was the wrong instrument and is retracted.
- **NAIRA MONEY MARKET IS A PRESERVATION TOOL THAT HAS NOT PRESERVED.** 2022–24 ran −10% to −15% real.
- **RETRACTED 3 Oct 2026 (B5): "the title chain is on the wedding's critical path."** He means income dependency. **Title is OFF the wedding's critical path** — but remains the critical path for the Lokoja sale, asset de-concentration and immigration proof-of-funds.
- **INCOME CONCENTRATION — track BOTH numbers.** Asset: 70.8%. Income: **95.8%.** Effect of each lever: Lokoja sold into MMF → ~70.1%; trading at burn → ~61.0%; both → ~49.5%. **Neither lever alone takes income concentration below 50%.**
- **LOKOJA FLAT:** worth up to ₦60m, yields 0.21%. Sold into an MMF it produces ~₦9.76m/yr instead of ₦100,000, takes Odion to 49.9%, rebuilds the reserve to 44 months. **HIGHEST-VALUE SINGLE DECISION AVAILABLE.** Gated entirely on title.
- **SHORT-LET WARNING:** at market-average performance short-let NETS LESS than long-let and needs ₦36–50m capex. Wins only at ₦70k+ ADR and 40%+ occupancy.
- **Move to Dubai BEFORE buying the St Kitts passport.** Structure beats passport.
- **Canada is permanently closed.** Do not raise it again.

---

7. THE FIVE SEATS

ENACTED 3 OCTOBER 2026. COO · CRO · Strategic Wealth/Asset Advisor · Performance Psychologist · **Income Origination Advisor (IOA).**

THE INTERNAL ANGEL MECHANISM:

- **TIER 1** ≤ ₦500,000/venture, from the Channel A annual allowance. No reserve floor. Most ventures should never leave this tier.
- **TIER 2** > ₦500,000, ONLY from MMF balance above a ₦15,000,000 twelve-month reserve floor. **AVAILABLE TODAY: NIL** (MMF ₦5m). Reached ~Aug 2027 on sweeps, or in one step by the Lokoja sale.
- **CAPS** 5% of financial assets total (~₦5.65m), 2.5% per venture (~₦2.83m).
- **NEVER** from Odion or an Odion redemption.
- **KILL RULE** — KPIs missed two consecutive reviews → funding withdrawn. **IT ENDS THE VENTURE, NEVER THE RELATIONSHIP.** Post-mortem, not demerit; a prior kill may NOT be cited to refuse a new proposal.
- **CAPS GOVERN FUNDING, NOT IDEATION** (his correction — the board had built the flaw in). Research is UNCAPPED. Over-cap ideas are PARKED with the condition that would fund them, never silently dropped. Every shortlist states what it excluded on capital grounds.

SEAT BOUNDARY: Wealth Advisor = what to do with capital he HAS. IOA = how to create cashflow he does NOT have. CRO keeps all trading risk.
