03_capital-title-sprint

CAPITAL & TITLE ACTION SPRINT

Issued: 18 September 2026 | **Board seats:** COO (execution) + Strategic Wealth Advisor (allocation) **Horizon:** 30 / 90 / 365 days | **Track:** Capital, property and title ONLY **Quant track:** BLOCKED pending Phase 3 (CRO). No trading OKRs are issued in this sprint — writing them before the Red Team Falsification Protocol has run would be the board inventing targets for a system it has never seen.

PART A — THE MONEY MARKET FUND PLAN

A1. Corrected yield data (September 2026)

The figures the board quoted in August were stale. Verified Q3 2026 rankings:

Fund	Manager	YTD yield	Minimum	Mgmt fee	Redemption
Coronation Money Market	Coronation Asset Management	**20.54%**	₦10,000	1.50%	24–48 hrs
DLM Money Market	DLM Capital Group	20.69%	₦10,000	1.50%	24–48 hrs
RT Briscoe Savings & Investment	RT Briscoe Capital	20.30%	₦1,000	n/d	24–48 hrs
First Ally Money Market	First Ally	20.01%	n/d	1.50%	24–48 hrs
STL Money Market	STL Asset Management	19.70%	₦5,000	1.50%	24–48 hrs
Greenwich Plus Money Market	Greenwich	18.81%	₦10,000	1.50%	24–48 hrs
CardinalStone Money Market	CardinalStone	18.25%	₦100,000	1.00%	24–48 hrs

AIICO and ARM do not appear in the Q3 2026 top ten. The 22.07% / 21.97% figures cited in August were from an earlier ranking period and no longer stand. Yields across the sector have compressed roughly 2–3 points as the CBN's rate cycle turned.

On the AIICO question: the fund manager is **AIICO Capital Limited**, an asset-management subsidiary of AIICO Insurance Plc. Not the insurance company itself. The distinction matters operationally — you open the account with AIICO Capital, and the SEC licence sits with the asset manager. It is not currently in the top ten regardless.

A2. Recommendation

Primary: Coronation Money Market Fund. 20.54% YTD, ₦10,000 minimum, 1.50% management fee, 24–48 hour redemption.

Chosen over DLM's marginally higher 20.69% on three grounds: institutional depth and balance-sheet strength behind the manager; longer published track record; and the fact that a 15 basis point yield difference on ₦5m is ₦7,500 a year — meaningless next to counterparty quality. When two options are within noise of each other, take the stronger institution.

Backup if onboarding stalls: STL Money Market (19.70%, ₦5,000 minimum) or **DLM** (20.69%).

Do not chase the top of the table month to month. Money market yields rotate. Switching costs you settlement days out of the market and achieves nothing.

A3. The liquidity objection — partly unfounded

You are holding back ₦3m of the ₦8m for "subsequent cash liquidity for any unforeseen circumstances." That instinct is sound, but the premise behind it is not:

A money market fund redeems in 24–48 hours with no penalty. It is not a locked product. Piggyvest is not meaningfully more liquid — it is simply more *familiar*. The genuine difference between them is about one business day.

So the real question is not "how much can I afford to lock up" — nothing is being locked. It is: **how much cash do I need available same-day, today, before the bank opens tomorrow?** For most emergencies in Nigeria — medical, travel, family — 48 hours is fine. For a small class of them it is not.

The board accepts ₦5m as your decision and does not contest it. But the ₦3m retained should be understood as a *convenience buffer*, not a liquidity necessity, and it should shrink as your comfort with the instrument grows. Recommended target: ₦1.5m retained in Piggyvest by December, the rest deployed.

A4. What this earns

	Piggyvest (~10%)	Coronation MMF (20.54%)	Gain
₦5,000,000	₦500,000/yr	₦1,027,000/yr	**+₦527,000/yr**
₦8,000,000	₦800,000/yr	₦1,643,200/yr	+₦843,200/yr

Against inflation of 15.91%, Piggyvest is a **negative real return of roughly −6%.** Coronation at 20.54% is a positive real return of roughly **+4.6%.** You are not choosing between two good options; you are exiting a position that loses purchasing power every month it runs.

A5. The standing rule

> **100% of incremental monthly surplus goes to the money market fund, not to Odion, until Odion falls below 50% of financial assets.**

This is a pre-commitment, written down before the next phone call. That is the entire point of writing it down.

PART B — WHY PASSIVE DE-CONCENTRATION ALONE WILL NOT WORK

The board proposed passive de-concentration — grow the denominator rather than shrink the numerator. Having now run the arithmetic properly, **it does not get there in a relevant timeframe.**

Current financial assets: ₦112.96m. Odion ₦80m = **70.8%.**

Elapsed	Surplus added @ ₦940k/mo	Financial assets	Odion share
Today	—	₦112.96m	**70.8%**
12 months	₦11.28m	₦124.24m	64.4%
24 months	₦22.56m	₦135.52m	59.0%
36 months	₦33.84m	₦146.80m	54.5%
50 months	₦47.00m	₦159.96m	**50.0%**

Four years and two months to reach 50%. That is not risk management, it is hoping nothing happens for four years.

Three levers can accelerate it:

1. **Active income** (trading, Sarah's copywriting) — the intended solution, but unproven and cannot be scheduled.
2. **Partial Odion redemption** — withdraw ₦20m, place in MMF. Costs ₦20m × 15.5pp = **₦3.1m/year** in foregone yield. Odion falls to ₦60m / ₦112.96m = 53.1% immediately.
3. **The Lokoja lever** — see Part C. This is the one.

PART C — THE LOKOJA FLAT IS THE HIGHEST-VALUE DECISION AVAILABLE TO YOU

C1. The number

Estimated value	**₦35,000,000 – ₦60,000,000** (midpoint ₦47.5m)
Annual rent	**₦100,000**
Gross yield	**0.21%**

An asset worth up to ₦60m is producing ₦8,333 a month. After any maintenance at all, it produces nothing. It may well be producing a net loss.

C2. What it becomes if sold

₦47.5m into Coronation MMF at 20.54% = **₦9,757,000 per year.** Against ₦100,000 today.

That is roughly 97 times the current income from the same capital. And it is not a clever trade or a risk being taken — it is the difference between capital that is working and capital that is asleep.

C3. What it does to everything else, simultaneously

Metric	Today	After sale into MMF
Financial assets	₦112.96m	**₦160.46m**
Odion concentration	70.8%	**49.9%**
Annual portfolio income	₦25.2m + ₦100k	₦25.2m + ₦9.76m
Liquid reserve (48-hr)	₦8m	₦55.5m
Months of runway	6.4	**44**

One transaction achieves in a single step what fifty months of disciplined saving achieves. It de-concentrates Odion below 50%, rebuilds the emergency reserve, adds ₦9.76m of annual income, and creates the hard-currency conversion pool for relocation — all at once.

C4. The honest counter-arguments

The board will not pretend this is costless.

It was your father's. That is a real consideration and the board does not treat it as irrational. But note what is actually being honoured: an asset in a city you do not live in, which you will not live in, producing ₦8,333 a month. If the intent of the inheritance was to provide for you, an asset earning 0.21% is not doing that. Capital honours its source by working, not by sitting still.

Lokoja market liquidity is thin. Kogi State has a far shallower secondary market than Abuja. A ₦47.5m asset may take 9–18 months to sell, and the achieved price may sit at the bottom of the range. **This is the strongest argument for starting the title work now rather than later** — the sale process cannot even begin until the title chain is complete, and both processes are slow. Run them in sequence and you are looking at two years.

Appreciation foregone. Lokoja property may appreciate. But at 20.54% compounding in an MMF, the property must appreciate more than 20% a year just to match — in a market with weak fundamentals. That is not a close call.

The alternative — re-let at market. Your Abuja flat was under-rented by 4.5x for a decade, so the Lokoja rent is probably also far below market. Even so: a realistic Lokoja 2-bed market rent of ₦600,000–800,000/yr on a ₦47.5m asset is a **1.3–1.7% yield.** Better than 0.21%, still not an investment. Re-letting is worth doing *while the property is being prepared for sale*, not instead of selling.

C5. Board recommendation

Sell the Lokoja flat. Begin title perfection immediately, because it gates everything.

Dissent recorded: the COO notes that sale proceeds landing in 2027–28 may collide with short-let capex and relocation timing, and that a forced sale into a thin market destroys value. The Strategic Wealth Advisor's position prevails on the grounds that a 0.21%-yielding asset cannot be defended at any horizon, and that starting late in a slow market is the actual risk.

PART D — THE DECEMBER–MARCH CASH CRUNCH

This has not been budgeted and it is the nearest hazard in the file.

Cash today	₦8,000,000
Surplus Sept–Dec (3.5 months × ₦940k)	+₦3,290,000
Cash at end December	**~₦11,290,000**
Short-let capex, your share	**−₦10,000,000**
Abuja rent foregone Dec–Mar (4 months)	−₦333,332
Cash at end March 2027	**~₦950,000**

That is under one month of runway, at the exact moment you have no rental income and a newly furnished flat with no bookings yet.

This is not a reason to abandon the short-let plan. It is a reason to **not fund it from the emergency reserve.** Three ways out, in order of preference:

1. **Stage the capex.** Furnish over four months rather than one. Occupancy ramps slowly anyway — a fully furnished flat sitting empty in January (Abuja's weakest month) earns nothing while having consumed all your cash.
2. **Fund capex from a partial Odion redemption**, not from working capital. ₦10m out of Odion costs ₦300k/month of income but leaves the reserve intact and de-concentrates at the same time. **This is the board's preferred route** — it solves two problems with one action.
3. **Delay conversion of your unit** until the first-converted units have produced three months of real booking data. See Part F.

PART E — TITLE PERFECTION: THE GATING ITEM

You hold **Letters of Administration** in your name plus two siblings and an uncle. That is the hard part, and it is done. What remains is the transfer chain.

E1. The chain

Step	What it is	Notes
1. Deed of Family Partition / Assignment	The instrument that vests each specific unit in each specific sibling, executed by the administrators	Your existing sibling agreement is evidence of intent, not a transfer
2. Stamping	1.5% stamp duty to FIRS	
3. Minister's Consent (FCT) / Governor's Consent (Kogi)	Land Use Act requirement	Abuja goes through AGIS
4. Registration	Recording at the land registry	This is what makes the interest enforceable against third parties

Timeline: 3–12 months. Cost: commonly 10–20% of value, though family partitions of an administered estate are generally lighter than arm's-length transfers. Get a fixed-fee quote rather than accepting a percentage.

E2. Instruction brief for the lawyer

Take this to counsel — ideally not the same lawyer holding the C of O, for reasons in E3:

> Estate of [father], died intestate January 2021. Letters of Administration granted to [three named siblings] and [uncle] as administrators. Estate includes a block of four 2-bedroom flats at Apo Resettlement, Abuja, and a 2-bedroom flat at Lokoja, Kogi State. C of O for the Abuja property is in the deceased's name.
>
> **Instructions:**
>
> 1. Conduct title searches on both properties and report any encumbrances.
> 2. Prepare a Deed of Family Partition vesting one specified Abuja unit in each of the four beneficiaries, and the Lokoja property in [David].
> 3. Attend to stamping, Minister's Consent (FCT) and Governor's Consent (Kogi).
> 4. Register both transfers and obtain registered title in each beneficiary's name.
> 5. Advise specifically on whether the intended commercial short-let use of the Abuja block requires any change of use consent, and on the FCTA's stated power to revoke land titles for unapproved commercial use of residential property.
>
> **Deliverables required:** fixed-fee quotation, itemised disbursements, and a written timeline with milestones.

E3. On the C of O and the lawyer

Your explanation is accepted and the board's earlier framing was too aggressive. Leaving the C of O with your father's lawyer was a deliberate security decision taken when the circumstances of your father's death were unresolved and you had reason to fear for your own safety. That is not negligence; it is discretion under threat, and it was a joint family decision. Recovery is on request.

One residual point, stated once and then dropped. The same individual holds ₦80m of your capital, pays 100% of your income, and holds the family title deed. Each of those is defensible on its own. The board's concern is only the correlation: a single adverse event touching that individual touches all three at once. Retrieving the C of O costs nothing, is available on request, and removes one of the three legs. **Do it during the title work — counsel will need the original anyway.**

PART F — THE SPRINT

30-DAY OKRs — by 18 October 2026

Objective 1: Stop losing money to the wrong savings instrument.

Key Result	Target	Status
KR1.1 Coronation MMF account opened	Account number issued	☐
KR1.2 ₦5,000,000 transferred and units allotted	Confirmation of units + NAV recorded	☐
KR1.3 Standing rule activated	Written instruction to self: surplus → MMF, not Odion	☐

Objective 2: Convert the title chain from intention into instructed work.

Key Result	Target	Status
KR2.1 Lawyer engaged on written instruction brief	Signed engagement letter	☐
KR2.2 Fixed-fee quotation obtained	Written quote, itemised	☐
KR2.3 Original C of O retrieved	Physical custody or with instructed counsel	☐
KR2.4 Change-of-use position on short-let obtained in writing	Written legal opinion	☐

Objective 3: Close the data gaps that block decisions.

Key Result	Target	Status
KR3.1 Lokoja flat formally valued	Written valuation from a registered estate surveyor	☐
KR3.2 C400 market-tested	3 written dealer offers	☐
KR3.3 Odion income reconciled	Bank statement vs 3% × principal, in writing, monthly	☐
KR3.4 Dec–Mar cash plan agreed	Capex funding source decided and documented	☐

90-DAY OKRs — by 18 December 2026

Objective	Key Results
Title chain in motion	Deed of Partition drafted and executed by all administrators · Stamping complete · Consent applications lodged
De-concentration underway	Odion below 66% of financial assets · MMF balance ≥ ₦8m · Piggyvest buffer reduced to ₦1.5m
Short-let decision made on evidence	Five-year comparison report delivered and reviewed with all four siblings · Formal written sibling agreement executed BEFORE any capex · Decision recorded: proceed, stage, or decline
Cash crunch neutralised	Capex funding source confirmed as Odion redemption, not working capital · Minimum ₦6m reserve maintained through March

365-DAY OKRs — by 18 September 2027

Objective	Key Results
Registered title in your own name	Abuja unit and Lokoja flat both registered · Both assets legally saleable and financeable
Lokoja capital released	Property listed · Sale completed or under contract · Proceeds deployed to MMF
Odion below 50%	Achieved via Lokoja proceeds plus accumulated surplus
Reserve rebuilt	≥ 12 months of burn (₦15m) held in 48-hour-liquid instruments
Hard currency position opened	Begin the ฿500,000 DTV seasoning clock — it must sit 3 months before application, so starting it early costs nothing and buys optionality
Abuja unit producing	Either re-let at ≥ ₦4.0m/yr, or short-let operating with three months of verified booking data

---

PART G — WHAT IS DELIBERATELY NOT IN THIS SPRINT

- **Trading OKRs.** Phase 3 has not run. The CRO will not issue targets for a system it has not examined.
- **Relocation execution.** Correctly gated on income, not on date. Scheduled tasks now monitor the thresholds.
- **St Kitts.** Deferred until after the move, per standing finding.
- **Canada.** Permanently closed at your and Sarah's decision, 18 September 2026.
