BOARD SESSION HANDOFF — 21 SEP to 3 OCT 2026

This session began as a one-off scheduled MMF execution check and ran well past its brief. Everything below is written into `MEMORY-CORE-tier1.md` — this is the summary, not the record.

1. WHAT WAS EXECUTED

₦5,000,000 into the Coronation Money Market Fund	Confirmed 1 Oct 2026. Full committed amount, from the ₦8m Piggyvest balance. ₦3m residual intact.
Sprint Objective 1	**CLOSED**, 17 days early
Still outstanding	the first Coronation statement, for realised-yield reconciliation

A constant-price fund has no purchase NAV, so the board's original ask was wrong; reconcile opening balance + date against income credited per period. **The client ID request was withdrawn** — an access identifier does not belong in project docs.

2. RULES NOW ACTIVE — RULE 1 v2 (supersedes v1, retired as unkeepable)

Clause	
1 — **Odion floor**	₦0 of surplus to Odion until Odion < 50% of financial assets. **Absolute.**
2 — Default	100% of surplus to the Coronation MMF
3 — **Channel A**	≤ 20% of **annual** surplus (~₦2.26m/yr) to other non-Odion *financial* assets. Clock-neutral.
4 — **Channel B1** (unforeseen)	Uncapped suspension. **Soft trigger:** any draw above one month's full surplus (₦941,666) is written up *before* the money moves.
4 — **Channel B2** (planned life expenditure)	Must *both* distort a month **and** be a one-off milestone. Funded by **sinking fund**, not withdrawal.
5 — Review	Anything over ₦250,000 in the ledger; Channel A reconciled each December

Settled: birthday gifts are **burn**, not B2. The Dangote ₦500,000 tranche 2 is the **first Channel A draw**, 4.4% of the annual ceiling.

BP1, logged at his instruction: design rules to be keepable, not aspirational. Before issuing any rule, sprint or OKR, ask what real circumstance would force a breach and build that channel in.

3. THE WEDDING

Target year 2027. Confirmed B2. No date, no sinking fund running. One gate: a reliable non-Odion income stream, passive or active, covering monthly burn (₦1,250,000) without drawing principal, that can also fund the wedding. **Condition C** is a sequencing rule, not a prohibition: no principal draw until the new income proves burn coverage, then a **reimbursable** draw — amount, monthly repayment and completion date in the ledger **at the point of withdrawal**, or it is a drawdown with good intentions. **MMF yield is ruled out of burn coverage** by him. So the Lokoja sale improves income concentration without moving the gate. **Review mechanic ratified:** Mar 2027, Sep 2027, then six-monthly. One test — **six consecutive months of non-Odion income ≥ burn. Sarah** has agreed the gate. Her income is excluded until she is earning **and** a joint account exists. Her income path is **deferred, not open**. **2027 rests entirely on a new income stream.** The asset route cannot complete that year; he has retained it as optionality and the board will not re-argue it.

4. THE FIFTH SEAT — ENACTED

Income Origination Advisor (IOA). Nothing in the four existing seats owned income origination; his own hierarchy ranks it first.

His addition — the Internal Angel Mechanism. Tier 1 ≤ ₦500,000/venture from the Channel A allowance. Tier 2 > ₦500,000, only from MMF balance above a **₦15,000,000** floor — **available today: nil.** Caps 5% / 2.5% of financial assets. Never from Odion. **Kill rule ends the venture, never the relationship. Caps govern funding, not ideation** — his correction, and the board had built the flaw in.

The income research is deliberately unstarted — it is the seat's first mandate and would otherwise land in a report nobody owns.

5. TRADING

Burn-coverage target settled at 1.5%/month. On an 80% prop split: $1,200/mo net against $937 of burn, **28% headroom**; the Naira would have to strengthen ~22% to ₦1,042 before it stops covering.

Drawdown log opened — first entries since inception. All four accounts in progress, Phase 1: FTMO #1 100*k* → **94k (−6.0%)**; FTMO #2 flat; FundingPips #1 $50k → $49k; FundingPips #2 flat.

CRO flag: on standard FTMO Phase 1 terms the $94k account needs **+17.0%** against only **−4.3%** of remaining rope — roughly **4× harder than a fresh $100k account**. 60% of its loss budget is spent. **Red Team it before any capital or attention returns.**

6. OPEN AGENDA, IN PRIORITY ORDER

1. **Engage the lawyer on the title chain.** KR2.1, open since 18 Sep. Gates the Lokoja sale, asset de-concentration and immigration proof-of-funds. Brief at `capital-title-sprint.md` §E2. **Waiting on an appointment, not analysis.**
2. **Red Team the $94k account.** Confirm the profit split per firm while you're at it.
3. **Dangote IPO** — offer closes **13 Oct**. The research brief is on his machine; attach it or land it as a project doc.
4. **IOA first mandate** — rank income streams to ₦1,250,000/mo, passive-first, portable, weighted to Tier 1 testability.

5. **DTV category selection** — the live Phase A blocker.

7. TWO THINGS THE BOARD GOT WRONG

B5 — read "de-concentrate the risk on Odion" as its own 50%-of-*assets* rule when he meant **income dependency**, and built a critical-path finding on it. Retracted the same day. *A shared word is not a shared definition.* It also concealed the real number: **Odion is 95.8% of his income** against 70.8% of assets.

B6 — quoted the −$40,419 rule-breaking figure as evidence of pressure sensitivity, when `trading-state-verified.md` §6 carries the caveat in its own heading: "*execution-focused, not rules-focused.*" *A figure travels with its caveat or it does not travel.*

The full error log — B1 through B7 plus BP1 — sits in `MEMORY-CORE-tier1.md` §3b. It exists because drift over decades is prevented by a ledger, not by good intentions.
